PROFESSIONAL SUMMARY

Backend Developer with over two years of production experience, specializing in Python, RESTful APIs, SQL, and process automation. Experienced in designing cloud architectures on GCP, implementing multi-agent AI systems, and automating business workflows in remote environments across proptech, digital government, and public health sectors. 1st place at Sabana Hack 2025 with real-time AI alert system for the Colombian Red Cross. Focused on delivering scalable, clean-code solutions with direct product impact.

EXPERIENCE

Backend & Cloud Developer — Blurealty July 2025 – Present | Remote

- Designed and implemented cloud architecture on GCP for a multi-agent system with OpenAI, integrating Vector Storage and cosine similarity for semantic document retrieval; enabling Q&A flows, knowledge base management, and automated interviews for lead capture.
- Defined product backend architecture from scratch, establishing CI/CD pipelines with GitHub Actions and configuring production deployments on GCP (Cloud Run, Pub/Sub, Cloud SQL).
- Designed relational SQL database schema (PostgreSQL), managing schema migrations with Alembic and query optimization to ensure data integrity and performance at scale.
- Automated critical business workflows with Python, reducing manual intervention and enabling asynchronous operational data processing.
- Integrated third-party APIs to automate operational processes, with robust error handling and structured logging for observability.
- Led frontend development in React/TypeScript, improving web accessibility from 3.4 → 9.2 (Wave, ADA compliance) and implementing event tracking for A/B testing.

Backend Developer — GovLab February 2025 – July 2025 | Remote

- Developed information management system for Corpohass centralizing avocado planting, production, and harvest metrics for data-driven operational decisions.
- Built institutional form platform for multi-university network with comparative data analysis.
- Designed and documented RESTful APIs with FastAPI and Pydantic, applying strict schema validation, relational SQL with SQLAlchemy, and migrations with Alembic.
- Integrated Twilio and SendGrid for automated business communications.
- Configured AWS S3 object storage and automated continuous deployment pipeline with Railway.

Software Developer — Centro de Innovación UCTS January 2025 – June 2025 | On-site

- Engineered a clinical vaccine recommendation engine in Node.js using matrix logic, processing PAI variables (age, pre-existing conditions, special cases) to generate personalized patient schedules.
- Redesigned and updated the Innovation Center institutional website, improving content structure and digital presence.
- Coordinated with health and technology teams to align technical specifications with clinical PAI protocols.

Web & Backend Developer — TurboCupones June 2024 – October 2024 | Remote

- Built 2 production REST APIs with Django REST Framework for a platform with thousands of users, implementing JWT authentication and advanced filtering.
- Collaborated with a 4-developer team under Scrum methodology, delivering features in short iterative sprints managed in Trello.

- Developed frontend interfaces with Next.js consuming system APIs.

KEY ACHIEVEMENTS

1st Place — Sabana Hack 2025 · Universidad de La Sabana

Engineered in 24 hours an AI-powered real-time alert system for the Colombian Red Cross, designed to mitigate flood and heatwave impacts in vulnerable areas.

Live Production Automations

Active production pipelines with n8n and WhatsApp Business, featuring autonomous containerized deployment via Docker and CI/CD.

TECHNICAL SKILLS

Backend: Python · FastAPI · Django REST Framework · Node.js · NestJS · TypeScript · Express

Frontend: React · Next.js

Databases: PostgreSQL · MySQL · Firebase · Vector Storage

Cloud / DevOps: AWS · GCP (Cloud Run · Cloud SQL) · Docker · CI/CD (GitHub Actions) · Railway · Linux

AI & Automation: OpenAI API · Multi-Agent Systems · RAG · Voice AI · n8n · Twilio · SendGrid · Embeddings

Other: Git · Postman · Alembic · Pydantic · JWT · Scrum

EDUCATION

B.S. in Computer Engineering · Universidad de La Sabana · GPA: 4.4/5.0 · Graduation: 2026 (Emphasis on Software Architecture)

LANGUAGES

Spanish — Native **English** — B1/B2 (Fluent technical reading and professional writing)
