PROFESSIONAL SUMMARY

Backend and FullStack Developer with over one year of production experience building RESTful APIs, information systems, and AI agents. Experienced in remote and on-site teams delivering solutions across proptech, digital government, and public health sectors. First place at Sabana Hack 2025 with a real-time alert system for the Colombian Red Cross. Focused on clean architectures, process automation, and maintainable code at scale.

EXPERIENCE

FullStack Developer — Blurealty July 2025 – Present | Remote

- Designed a multi-role AI agent with OpenAI, integrating Vector Storage and cosine similarity for semantic document retrieval; supporting Q&A flows, knowledge base management, and automated lead-capture interviews.
- Improved web accessibility from 3.4 to 9.2 (Wave scale) across multiple pages by implementing ADA standards, image optimization, and rendering strategies.
- Migrated backend codebase to TypeScript, reducing runtime errors and improving long-term maintainability.
- Implemented event tracking and A/B experiments to ground product decisions in real user behavior.
- Integrated external APIs to automate critical business workflows, reducing manual intervention in operational processes.

Backend Developer — GovLab February 2025 – July 2025 | Remote

- Built an information system for Corpohass centralizing avocado production, harvesting, and planting metrics, enabling data-driven operational decision-making.
- Developed a forms platform for the educational sector, consolidating responses from multiple universities for comparative institutional analysis.
- Designed and documented RESTful APIs with FastAPI and Pydantic, applying strict schema validation and database migrations with Alembic.
- Integrated Twilio and SendGrid to automate communications within business process workflows.
- Configured AWS S3 storage and an automated deployment pipeline with Railway.

Developer — UCTS Innovation Center January 2025 – June 2025 | On-site

- Built a vaccine recommendation engine in Node.js using matrix logic, processing EPI variables (age, pre-existing conditions, special cases) to generate personalized recommendations per patient.
- Designed and updated the Innovation Center's institutional website, improving content structure and digital presence.
- Coordinated with health and technology teams to align technical requirements with EPI protocols.

Web Developer — TurboCupones June 2024 – October 2024 | Remote

- Built 2 production REST APIs with Django REST Framework for a platform serving thousands of users, implementing JWT authentication and advanced filtering.
- Collaborated with a team of 4 developers under Scrum, delivering features in short cycles managed in Trello.
- Developed frontend interfaces with Next.js consuming the system's APIs.

ACHIEVEMENTS

1st Place — Sabana Hack 2025 · Universidad de La Sabana

Built in a team, within 24 hours, a real-time AI-powered alert system for the Colombian Red Cross, aimed at reducing the impact of floods and heat waves in high-risk zones across the country.

Production Automations

Active pipelines with n8n and WhatsApp Business integrations, with autonomous deployment via Docker and CI/CD.

TECHNICAL SKILLS

Backend: Python · FastAPI · Django REST Framework · Node.js · TypeScript · Express

Frontend: React · Next.js

Databases: MySQL · Firebase · PostgreSQL · Vector Storage

Cloud / DevOps: AWS S3 · Docker · CI/CD (GitHub Actions) · Railway

AI & Automation: OpenAI API · RAG · n8n · Twilio · SendGrid · Embeddings · Cosine Similarity

Other: Git · Postman · Alembic · Pydantic · JWT · Scrum

EDUCATION

B.Sc. in Computer Engineering · Universidad de La Sabana · Expected Graduation: 2026

LANGUAGES

Spanish — Native **English** — B1/B2 (fluent technical reading and writing)
