

JHOJAN JIMENEZ

Software Engineer | Backend & Cloud Architecture | Full Stack Capabilities

jhojanjimene@gmail.com • +57 320 328 2014 • linkedin.com/in/jhojan-jimenez-dev • dev.jhojan.cloud • Bogotá, Colombia

PROFESSIONAL SUMMARY

Software Engineer focused on Backend Development, Cloud Architecture, and Data Systems with 2+ years of production experience. Proficient in Python (FastAPI, Django), Node.js/TypeScript, Java, and complementary Full Stack development (React, Next.js). Hands-on experience engineering data ingestion & operational analytics pipelines (SQL, Pandas, ETL), containerized GCP/AWS deployments with Docker and CI/CD, and multi-agent AI systems with OpenAI and vector search. 1st place at Sabana Hack 2025.

WORK EXPERIENCE

Backend & Cloud Infrastructure Engineer — Blurealty | July 2025 – Present | Remote

- **Architected and deployed** cloud infrastructure on GCP (Cloud Run, Cloud SQL) for an OpenAI multi-agent system, integrating Vector Storage and cosine similarity for semantic document retrieval in Q&A and lead-capture pipelines.
- **Structured** automated CI/CD pipelines with GitHub Actions and Docker multi-stage builds, eliminating environment drift and ensuring zero-downtime continuous delivery.
- **Modeled** relational PostgreSQL schemas with Alembic, optimizing SQL queries and indexing to handle high-concurrency ingestion and operational data analysis.
- **Led** full-stack frontend refactoring in React/TypeScript, elevating web accessibility audit score from 3.4 to 9.2 (WAVE / ADA) and instrumenting telemetry events for conversion analytics.

Backend & Data Systems Engineer — GovLab | February 2025 – July 2025 | Remote

- **Built** the centralized agricultural data analytics and ingestion platform for Corpohass using FastAPI and PostgreSQL, consolidating production, acreage, and harvest datasets for operational decision-making.
- **Engineered** production RESTful APIs and ETL data transformations applying strict Pydantic validation, SQLAlchemy, and OWASP vulnerability mitigation with Alembic migrations.
- **Implemented** asynchronous document ingestion pipelines on AWS S3 via pre-signed URLs and automated transactional notification dispatchers via Twilio and SendGrid.

Software & Health Data Engineer — UCTS Innovation Center | January 2025 – June 2025 | On-site

- **Engineered** a deterministic clinical recommendation engine in Node.js/TypeScript, developing multidimensional matrix evaluation algorithms over complex PAI datasets (ages, contraindications, pathologies).
- **Translated** public health regulations alongside epidemiologists into zero-ambiguity logical data models, while modernizing institutional web architecture.

Web & Backend Engineer (Full Stack) — TurboCupones | June 2024 – October 2024 | Remote

- **Developed** high-throughput REST APIs with Django REST Framework for a coupon platform, implementing JWT authentication, SQL query tuning, and cursor-based pagination (<100ms response times).
- **Collaborated** in an agile Scrum team delivering responsive Next.js interfaces consuming backend microservices under continuous integration workflows.

KEY ACHIEVEMENTS

- **1st Place — Sabana Hack 2025 (Universidad de La Sabana):** Architected and implemented in 24 hours an AI-powered real-time emergency alert system for the Colombian Red Cross, processing environmental data for disaster risk mitigation.

TECHNICAL SKILLS

- **Backend:** Python (FastAPI, Django REST Framework), Node.js, TypeScript, Java, NestJS, Express.js
- **Frontend:** React, Next.js, TypeScript, Tailwind CSS, HTML5, CSS3, RESTful API consumption
- **Databases & Analytics:** PostgreSQL, SQL, Pandas, Data Modeling, ETL Pipelines, Vector Storage (Embeddings, Cosine Similarity)
- **Cloud & DevOps:** GCP (Cloud Run, Cloud SQL), AWS S3, Docker, CI/CD (GitHub Actions), Railway
- **Tools & Environments:** Linux, Git, Postman, JWT, Pydantic, Alembic, Scrum, RESTful APIs

EDUCATION & LANGUAGES

B.S. in Computer Engineering — Universidad de La Sabana | 2022 – 2026 | Chía, Colombia

- **Scholarship & Academic Merit:** Recipient of **80% Academic Excellence Scholarship** • Cumulative GPA: **4.4 / 5.0** (Emphasis on Software Architecture and Distributed Systems).
- **Languages:** Spanish (Native) • English (B2 — Professional working proficiency & technical documentation).
